# Code

# Triple Correlations

# Motivation:

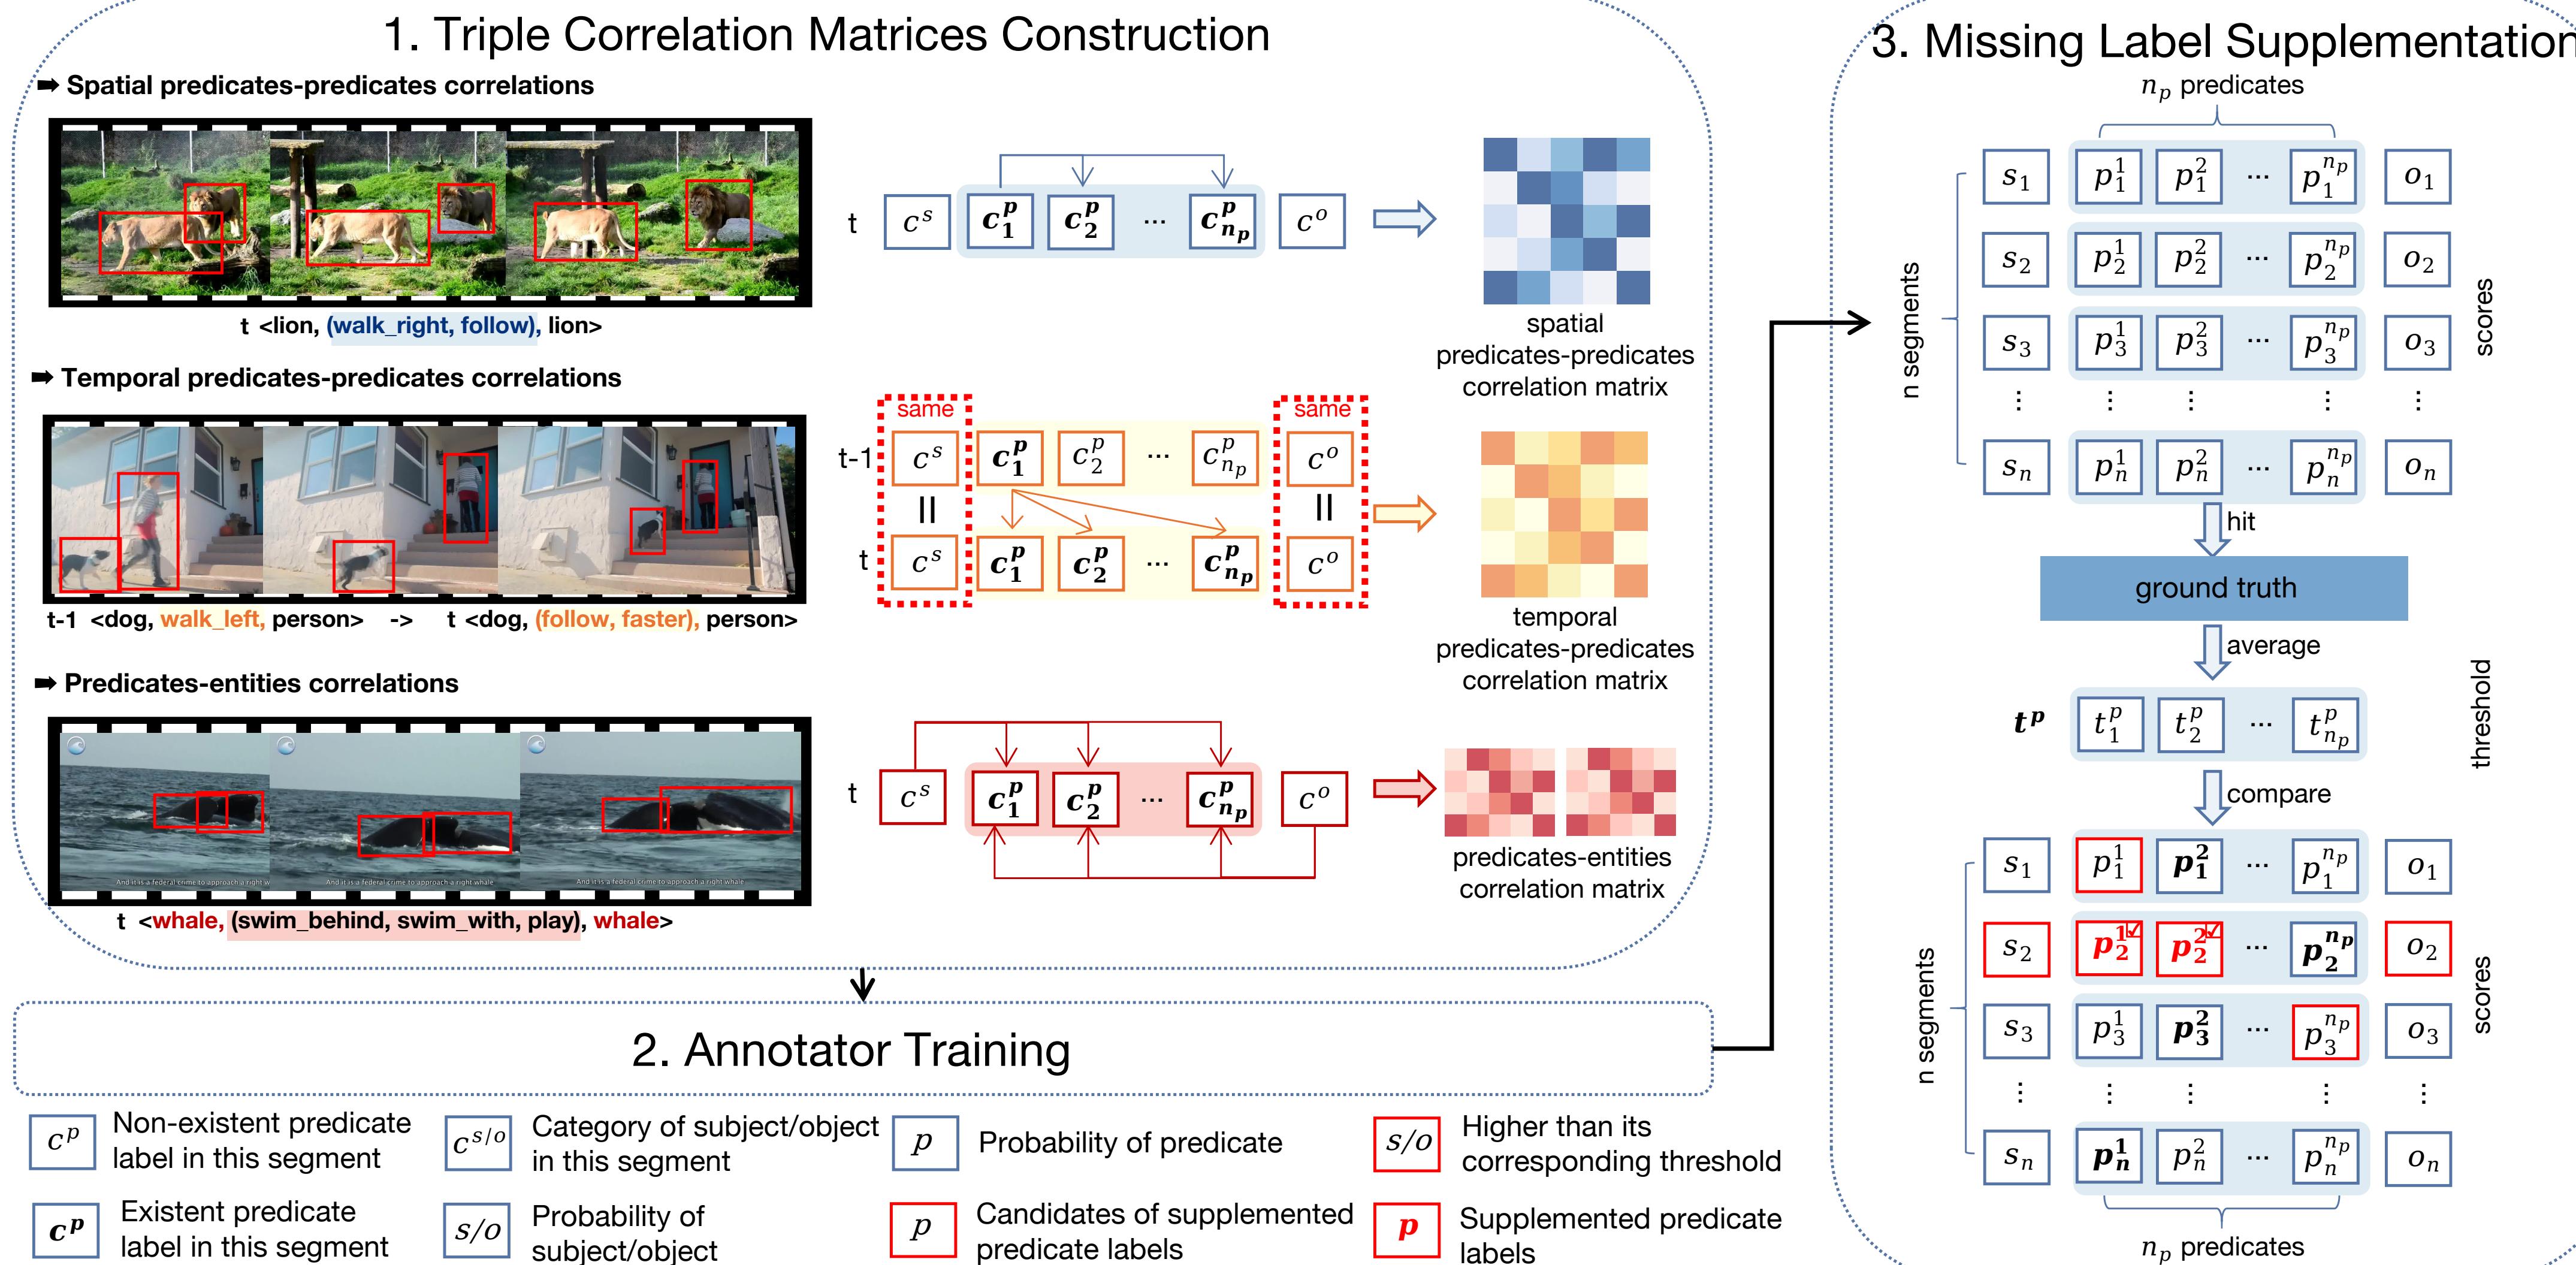

Due to the inherently biased distribution and missing annotations in the training data, current VidSGG methods have been found to perform poorly on less-represented predicates.

# Contributions

- the first method to address VidSGG from an explicit perspective of missing label supplementation.
  - use triple complementary correlations to guide the label supplementation process, ensuring that the missing labels are effectively supplemented to achieve an unbiased graph generation.

# Triple Correlations-Guided Label Supplementation

The predicate labels that are supplemented are directly applied to the training set.

# Experiments Results

# Performance of Trico on VidVRD dataset in PredCls.

Method	Relation Detection						Relation Tagging	
	mR@50	mR@100	R@50	R@100	Mean	mAP	P@5	P@10
VidVRD-II [30] <sup>*</sup>	37.09	45.45	44.43	59.28	46.56	47.32	47.30	36.50
+Trico (ours)	36.57	48.10	<b>44.63</b>	<b>59.65</b>	47.24	<b>48.47</b>	48.20	36.40
+Trico+LoS (ours)	<b>37.21</b>	<b>49.15</b>	43.35	59.38	<b>47.27</b>	48.17	<b>48.60</b>	<b>37.45</b>

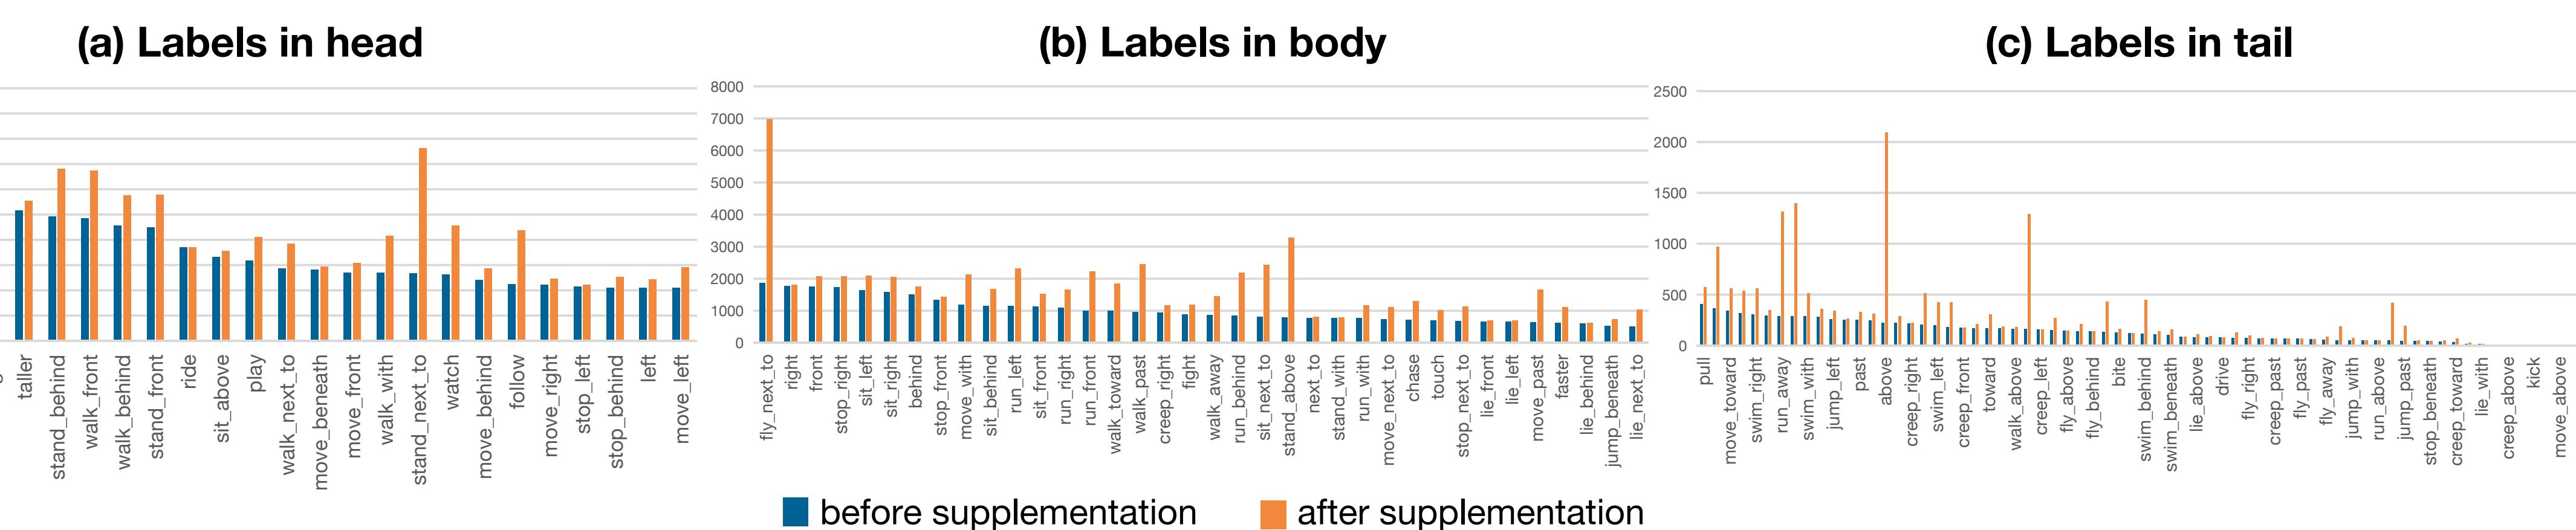

---

\* We re-implemented VidVRD-II and fixed the fake performance boost issue of the original evaluation API.
